CAPE TOWN · GARDEN ROUTE · SINCE 1998

Timber homes built for the Cape coast.

Structural timber framing, roof construction and decking — engineered for wind, salt and sun, and signed off to NHBRC standard.

Start a project | See our work

NHBRC REGISTERED BUILDER · ITFB MEMBER · ITFB SILVER AWARD — STRUCTURES OVER 220 M² · BUILDING SINCE 1998

WHO WE ARE

We are a small, hands-on timber construction company. Horton runs the site; Tamryn runs everything else. Nothing gets subcontracted to people we have not worked with.

Timber framing, masonry, roofs and decks — combined with design and business experience from England, Australia, Cape Town and Johannesburg.

We work alongside **Jacques Cronjé Timber Design** on drawings, so what gets designed is what can actually be built.

What we build

All services →

Timber homes

Full builds from slab to handover — timber frame, hybrid timber-and-masonry, double storey.

Roof construction

Engineered trusses and exposed structural roofs, designed and erected by our own team.

Decking

Pool surrounds, balconies and walkways in hardwood or composite, built for coastal exposure.

PHOTO · LOFT CONVERSION

Loft conversions

Turning roof space into a bedroom, studio or flat — structure, stair and finishes.

Selected work

All 8 projects →

Elephant Hide Lodge

KNYSNA

Stone and log lodge on the Welbedacht cliff tops, overlooking the lagoon and the Outeniquas.

House Goosen

PAARL

Masonry, steel portal frames and timber framing on a steep slope over the Paarl valley.

House Carstens

SUIDERSTRAND

Views over bay and sea at the southern tip of Africa, near Cape Agulhas.

How a build runs

Five stages, and you know at every point who is on site and what happens next.

01

Site & brief

We walk the site with you, talk budget honestly, and say if timber is the wrong answer.

02

Design

Drawings with Jacques Cronjé Timber Design, or with your own architect.

03

Engineering & approvals

Rational design, council submission and NHBRC enrolment handled for you.

04

Build

Our own crew on site, with photo updates you can forward to family overseas.

05

Handover

Snag list closed out, plus a written maintenance schedule for the timber.

INSTITUTE FOR TIMBER FRAME BUILDERS

Silver Award, structures larger than 220 m²

Judged on structure, detailing and finish by the industry body that sets the standard for timber frame construction in South Africa.

CLIENT

> [CLIENT TESTIMONIAL — two or three sentences from a recent owner. Ask Tamryn for one from the Goosen or Carstens build.]

KNYSNA, WESTERN CAPE

Elephant Hide Lodge

The lodge sits on top of the Welbedacht cliff tops, three kilometres from Knysna town, looking out over the lagoon, the Outeniqua mountains and the indigenous forest.

The brief was to build something that belonged to that view rather than interrupting it. Stone and wood throughout, natural finishes, and a structure heavy enough to feel permanent on an exposed ridge.

WHAT WE BUILD

Four things, done properly.

We do not take on plastering, paving or general renovation work. What follows is what we are set up for, with our own crew and our own equipment.

01

Timber homes

Full builds from foundation to handover. Timber frame throughout, or timber combined with masonry and steel portal frames where the site demands it.

- Single and double storey, on flat or steep sites
- NHBRC enrolment and council submission handled
- Coastal detailing — fixings, treatment and cladding rated for salt air

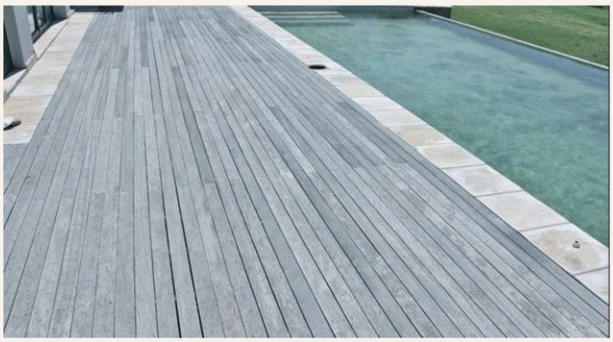

02

Roof construction

Engineered trusses, exposed structural roofs and re-roofs. We design the roof with the house rather than bolting one on at the end.

- Truss design, supply and erection
- Exposed rafters and beams where the ceiling is the finish
- Replacement roofs on existing masonry homes

03

Decking

A deck turns unused space around a pool, home or garden into the part of the house everyone actually uses. Built on a structure that will still be sound in fifteen years.

- Hardwood, treated pine or composite
- Pool surrounds, elevated balconies, walkways and stairs
- Written maintenance schedule on handover

04

Loft conversions

The cheapest room you will ever add is the one already under your roof. We handle the structure, the stair, the dormers and the finishes.

- Structural assessment before you commit to anything
- Dormers, skylights and new stairwells
- Family stays in the house while we work

Why timber, honestly

Timber is not always the right answer. When it is, this is why.

Faster to weather-tight

A frame goes up in weeks, not months, and there is no drying-out period before finishes start.

Kinder to a difficult site

Lighter loads mean less excavation and simpler foundations on slopes, sand and cliff-top sites.

Warmer, and quieter

Insulation sits inside the wall cavity rather than being added to it, so running costs stay down.

Questions we get asked first

What does a timber home cost per square metre?

[ANSWER — a real range, even a wide one. This is the single most searched question and the one every competitor dodges. Answering it is why people will phone you instead of them.]

Will a bank finance a timber frame house?

[ANSWER — NHBRC enrolment is the part banks care about. Say plainly that you enrol every build.]

How long does a build take?

[ANSWER — typical months from site handover to occupation, and what pushes it out.]

What maintenance does timber actually need at the coast?

[ANSWER — the honest schedule. Owners who hear it up front stop worrying about it.]

Not sure which of these you need?
